Summary

Software engineer with experience in web, mobile, and game development, currently pursuing a postgraduate degree in Cybersecurity. I work with vulnerability analysis and system hardening, and I am seeking opportunities in application security and software development.

Professional Experience

Lenovo / Laboratório de Sistemas e Banco de Dados Resident — Mar 2026 — Present

I work as a security analyst evaluating applications and low-level components on Lenovo platforms, identifying vulnerabilities and proposing fixes. During the classroom period of the residency, I deepened my studies in offensive security, reverse engineering, and secure development. I was later assigned to the Linux security and systems administration team, where I now contribute to the hardening and analysis of Linux images.

Stack: C, C++, Python, Kali Linux, Metasploit, Nmap, Burp Suite, Wireshark, OWASP Top 10, SELinux/AppArmor, iptables.

Compass UOL

Trainee Developer Fullstack — May 2024 — Jan 2025

I developed and maintained systems for managing telecommunications applications, implementing new features in microservices, building user reports, adapting interfaces, and performing releases to the production environment. This work increased application stability and streamlined the delivery flow of new features.

Stack: JavaScript, TypeScript, NestJS, Express, Angular, Ionic, MongoDB, Redis, Azure DevOps.

Intern Backend — May 2023 — Oct 2023

I worked in an agile environment using Scrum, developing and maintaining REST APIs with Node.js, TypeScript, Express, and MongoDB. I helped implement authentication, security, documentation, and endpoints, and wrote unit and integration tests. I also used AWS services to deploy and maintain the application in production.

Stack: TypeScript, Express, MongoDB, Docker, AWS.

Education

Postgraduate Degree in Cybersecurity - UFC Campus Pici — 2026 — Present

Cryptography, Network Security, Operating Systems Security, Infrastructure.

Bachelor's Degree in Information Systems - IFCE Campus Cedro — 2021 — 2026

Data Structures, Software Engineering, Web Programming, Project Management.

Technical High School in Information Technology - IFCE Campus Cedro — 2017 — 2020

Programming Logic, Databases, Object-Oriented Programming.

Projects

Weather Dashboard Demo — Repository

Dashboard for visualizing and analyzing weather data, built on a microservices architecture. The system periodically collects weather data, performs intermediate processing, persists it, and generates AI-driven insights, giving the end user an interactive view.

Stack: Python, Go, TypeScript, NestJS, React, Vite, MongoDB, RabbitMQ, Ollama, Docker.

Project Kiwi Demo — Repository

Educational game for teaching English, designed to make gamified learning more collaborative and interactive. The project focused on user experience, two-player gameplay, and usability. Tests with students showed that adding a multiplayer mode increased engagement, acceptance, and interest in the content.

Stack: Godot, GDScript, Nakama, Docker.

Blackwell Repository

API and mobile application for generating electronic physiotherapy records for a teaching clinic. The solution was built with Domain-Driven Design and Clean Architecture, ensuring scalability and maintainability. The project streamlined the care workflow, reduced data entry errors, and sped up access to patient information.

Stack: TypeScript, NestJS, Prisma, Vitest, PostgreSQL, Redis, Docker, React Native, Expo.

Skills

Programming Languages	JavaScript, TypeScript, C#, C, Go, Java, Python.
Web Development	NodeJS, Express, NestJS, React, NextJS, Angular, VueJS, NuxtJS, Tailwind, .NET
Mobile Development	React Native, Expo, Ionic.
Cybersecurity	Pentest, Cryptography, Linux, Burp Suite, OWASP Top 10, Wireshark.
Databases	MySQL, SQL Server, PostgreSQL, MongoDB, Redis.
Tools and Cloud	Docker, AWS, Google Cloud, Azure DevOps, Ollama, Godot.
